Introduction

The goal of this project is to implement a fully functional walk-in clinic application to assist both patients and clinics in managing their appointments and services using Android Studio. The purpose of this project is to expand on the theoretical work, apply coding techniques and gain experience of cooperating with teammates.

The app is designed for three types of users; administrator, employee and patient. Each type of user has its own set of functionalities and is able to register an account associated with his/her role. By signing in different roles in the login page, the user can be redirected to the new interface where its functionalities apply. For example, signing in as an employee, the user can create and delete service for patients.

Following the instructions, we managed to build up this application step by step through each deliverable and the UML diagram of this project was updated whenever a change was being made.

UML

App Screenshots

All app screenshots are shown below respectively.

1. Login interface
2. Sign up as an employee
3. Log in as an employee
4. Edit my profile
5. Edit working hours for the clinic
6. View services that provided
7. Add services (services list given can be modified by admin)
8. Service added
9. Long pressed to delete a service
10. Log in as an administrator
11. Administrator interface
12. Modify a new service
13. Service added
14. Accounts can be viewed by an administrator
15. Log in as a patient
16. Appointment booking page
17. View appointments
18. Services provided
19. Hours to book
20. Date to book
21. Calendar view appointment and Approximate wait time

The image shows a mobile application interface for "WalkInClinicServices". At the top, there is a green header bar with the app name. Below the header, the title "Book Appointment" is centered. The form contains several input fields: "Address", "Service:" (with a dropdown menu showing "Fluids test"), and "Working Hours" (with sub-fields for "From:", "To:", and "Day:" each having a dropdown). A "SEARCH" button is positioned below the "Working Hours" section. Underneath the search button, the text "Available clinics" is displayed. At the bottom of the form, there are two buttons: "VIEW BOOKINGS" and "LOGOUT". The entire form is set against a light gray background. The phone's status bar at the top shows the time as 8:08 and various icons for settings, notifications, and connectivity.

Lessons learned

Through this project, we as a team learned not only technical skills but soft skills as well which will be useful in the future. We learned a vast amount of app functionalities and how to implement them all in the android studio environment. We also learned to apply design techniques and patterns learned in class in order to optimize our system and domain model. In terms of team skills, we learned to communicate any concerns with had about the project or one another and also motivate each other when needed. The purpose of this project was to expand on the theoretical work, apply coding techniques and gain experience of cooperating with teammates and one can conclude it did meet those objectives.
